

Based on the LEED 2009 v3 standard for New Construction and Major Renovations –

- Jerith Aluminum Fences are constructed from aluminum extrusions with a recycled content of at least 78% by weight. Post-consumer scrap is a minimum of 17% of the content and pre-consumer scrap constitutes a minimum of 61% of the material. This meets the Materials and Resources (MR) Credit 4: Recycled Content of 20% minimum (post-consumer + ½ pre-consumer) requirements. Using this formula, the total combined Recycled Content of our aluminum is 47.5%.
- Jerith Patriot Ornamental Welded Wire Fence also meets the recycling standards set by MR Credit 4. The recycled content of these fences is at least 88% by weight. Post-consumer scrap represents 47% of the content by weight, and pre-consumer scrap accounts for 41.5%. Using the Recycled Content formula yields a total of 67.75% recycled content.

This should allow any project using Jerith products to be eligible for 2 points in the MR Credit 4: Recycled Content category.

In addition, the recycled aluminum used in Jerith Aluminum Fences (78% by weight) is sourced within 150 miles of our fabrication plant, so these products are also eligible for 2 points under MR Credit 5: Regional Materials: 20% Extracted, Processed & Manufactured Regionally if they are used within a 350 mile radius of our location in Philadelphia. (Patriot Welded Wire Fence is NOT eligible for this credit.)

If further information is needed regarding LEED, please call our Customer Service Department at 800-344-2242 or email them at [cs@jerith.com](mailto:cs@jerith.com).
